                                                                                                                                                                             Submitted (21-APR-1999) E-mail contact: humquery@sanger.ac.uk Submitted (21-APR-1999) E-mail contact: humquery@sanger.ac.uk rhis sequence was generated from CDNA clones isolated using sequence from the bacterial clone 272116 (AL023764) and EST data. The EST sequences listed match this sequence with an identity of a least 95% between the coordinates shown.

Further information can be found at http://www.sanger.ac.uk/HGSP/Chrl/ Partial, experimentally determined gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              /note="matches EST AI215131 from clone IMAGE:1925595"

through the I.M.A.G.E. Consortium/LLNL at: http://image.llnl.gov
Series: IRAK Plate: 68 Row: k Column: 17
This clone was selected for full length sequencing because it
passed the following selection criteria: matched mRNA gl: 14196444.

REDO human CDNA sequencing project supported by Ministry of

Economy, Trade and Industry of Japan; CDNA full insert sequencing:

Research Association for Biotechnology (RAB) ilbrary

Construction: Helix Research Institute (HRI) (supported by Japan

Key Technology Center etc.); 5'- & 3'-end one pass sequencing: RAB,

HRI, and Biotechnology Center, National Institute of Technology and

Evaluation; clone selection for full insert sequencing: HRI and

RAB; annotation: HRI and RAB.

Submitted (21-APR-1999) E-mail contact: humquery@sanger.ac.uk

This sequence was generated from cDNA clones isolated using

sequence from the bacterial clone 272L16 (AL023754) and EST data.

The EST sequences listed match this sequence with an identity of at

least 95% between the coordinates shown.

Further information can be found at

http://www.sanger.ac.uk/HGP/Chrl/ Partial, experimentally

determined gene.

Direct Submission

Louding (27-NOV-1998) Sanger Centre, Hinxton, Cambridgeshire, CB10 15A, UK. Email enquiries: humquery@sanger.ac.uk CB10 15A, UK. Email enquiries: humquery@sanger.ac.uk CD10e-12, 1998 this sequence version replaced gi:3873472.

On Dec 12, 1998 this sequence version replaced gi:3873472.

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence is the entire insert of clone 272L16. This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated human repeat sequence elements (e.g. Alu). Where the sequence is ambiguous, there is an annotation using the 'unsure'
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 272L16 is from the library RPCII constructed at the Roswell Park Cancer Institute by the group of Pieter de Jong. For further details see http://bacpac.med.buffalo.edu/ VECTOR: PCTPAC2 This sequence was generated from a human chromosome 1 bacterial clone contig constructed in collaboration by the Sanger Centre chromosome 1 mapping group and Brian Schutte, Bryan Bjork, Kevin Coppage and Jeffrey Murray. Department of Pediatrics, University of Iowa, USA. Further information can be found at http://www.sanger.ac.uk/HGP/Chri.
